HIAB XS 435 K Crane

The HIAB XS 435 K offers tremendous power and reach with smooth and precise controls. Designed for building sites, the XS 435 K has a lifting capacity of 280,200 ft-lbs and a vertical reach of 92' (28 m) from ground level.

With the smooth controls that HIAB cranes are known for, the XS 435 K makes deliveries easy, whether through windows, balconies or to rooftops. Efficiency of operation is ensured by Hi Pro controls, Valve 91 and the remote control CombiDrive. Together, these technologies – exclusive to HIAB – provide ease of use with precision timing and delivery.

The double telescoping inner boom and four telescoping outer boom extensions are built to handle the heaviest loads in any kind of conditions. The extensions are internally mounted and well insulated to protect them from damage. Each boom extension also includes side supports to increase stability and precision, especially for long outreaches. The crane was also designed to keep the hose tracks cushioned from road vibration and potential damage from tie down straps and trees.

A variable pump comes standard. By providing the exact amount of oil the crane needs, it means less oil is used. When you pump less oil, you use less diesel – an important factor in saving money and in reducing carbon dioxide emissions. Lower oil use also means less energy is converted to heat, which reduces wear.

Stabilizers - 23' (7m) wide – come standard on the XS 435 K, with an option to add rear stabilizers if stability is a concern. Movement of palletized materials and stacked drywall is easy and safe with the standard drywall pallet fork. With precision controls and all of the quality and innovation HIAB is known for, the XS 435 K offers truly outstanding performance, with minimal effort.
